

SRINIVAS KOUSHIK KODUKULA

College Park, MD | +1 (202) 341-9800 | skoduku1@umd.edu | [LinkedIn](#)

EDUCATION

University of Maryland, College Park, MD

Jan 2026 - Dec 2027

Master of Engineering in Cybersecurity | **GPA: 4.0/4.0**

Relevant Coursework: Cloud Security, Network Security, Hacking of C Programs and Unix Binaries

GITAM University, Visakhapatnam, India

2020 - 2024

Bachelor of Technology in Computer Science and Engineering | **CGPA: 8.47/10**

TECHNICAL SKILLS

Cybersecurity: Network Security, Threat Detection & Analysis, Anomaly Detection, Vulnerability Assessment, Application Security, Web Security, Threat Modeling, Risk Assessment, Cryptography

Systems & Security: Ghidra, GDB, Bash/Shell Scripting

Web Security: SQL Injection (SQLi), Cross-Site Scripting (XSS), Cross-Site Request Forgery (CSRF), Burp Suite, Web Vulnerability Testing

Security Tools: Wireshark, Burp Suite, Metasploit, Nessus, OpenVAS

Cloud & Infrastructure: GCP, AWS (VPC, IAM, RDS, CloudFormation), Microsoft Azure, Docker, TLS, MFA, Network Segmentation

Programming: Python, JavaScript, SQL, Git

CERTIFICATIONS

- [Microsoft Certified: Azure Security Engineer Associate \(AZ-500\)](#)
- [Google Cloud Professional Cloud Security Engineer](#)
- EC-Council Certified Ethical Hacker (CEH v12)
- SecOps Certified AppSec Practitioner (CAP)

EXPERIENCE

Salesforce Developer / Administrator - *Salesforce*

Apr - May 2023

- Developed enterprise applications using Apex and Lightning Web Components (LWC), translating business requirements into structured application workflows.
- Managed platform data, reporting, and access controls while applying data-security and identity/access-management practices to enterprise workflows.

Data Science Intern - *BrainOVision*

Apr - Jun 2023

- Built and evaluated regression models using Python, Pandas, NumPy, and Scikit-learn to analyze cost inefficiencies in the food industry.
- Evaluated Random Forest, Support Vector Regression, and Decision Tree Regression models; Decision Tree Regression achieved a reported **98.2394% accuracy**.

PROJECTS

Trust-Based Detection of Malicious Nodes in VANETs - *Published research*

- Developed and published a trust-based Grey hole attack detection model using GSR routing, node-behaviour analysis, trust thresholds, and dynamic trust assessment across 1 Cluster Head, 50 On-Board Units, and 20 Roadside Units.
- Evaluated security and network-performance trade offs using packet delivery ratio, packet loss ratio, throughput, end-to-end delay, and routing overhead, achieving **92.5% PDR, 7.5% PLR, 819.2 Kbps throughput, 0.0075s E2E delay**, and 80 routing overhead.

AWS Secure Three-Tier Banking Application & IAM Governance

- Designed and evaluated a secure three-tier AWS banking architecture using public/private subnet segmentation, TLS encryption, MFA, Active Directory, and Amazon RDS to address application, identity, and data-security risks.
- Automated infrastructure deployment with CloudFormation and implemented least-privilege IAM and network isolation around **PCI DSS** security requirements.

CompliAI: AI-Driven Legal & Compliance Platform

- Architected a GCP platform integrating the Gemini API to automate extraction and analysis of complex regulatory documents for risk and compliance workflows.
- Designed backend validation pipelines to sanitize unstructured LLM outputs and validate AI-generated results before downstream use.
